

## Cable Kit 3534 Interface 3009/76

### Mimer SoftRadio – Icom SAT100M

#### Remote functionality

This cable kit will together with the Mimer Network Interface give remote control of the radio's audio and PTT functions.

Mimer SoftRadio will also show a Virtual Control Head, resembling the radios front panel. The important radio functions are available from there.

#### Radio programming

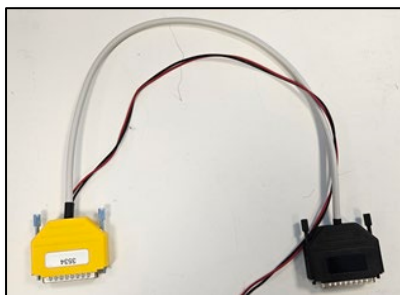

No special programming is needed in the radio unit. But there are a few settings that needs to be checked. Se next page.

The volume control on the radio front panel does not change the audio to the interface, so it can be turned all the way down.

#### Cable Kit

The interface is connected to the radio through a 25PIN D-sub cable. Make sure to connect the correct end to radio and interface respectively. Yellow connector to the interface.

The interface is powered through 12VDC, ordinarily the same PSU as the radio unit.
