

Connecting radios all over the world

Remote control your Sailor 6222/6248 Marine radio with VoIP audio.

Virtual Control Head of the 6222

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories. **“It feels like sitting in front of the radio”**

Each operator can handle many radios and each radio can be remote controlled by many operators.

The remote control option for the Sailor 6222 & 6248 radios includes not only audio and PTT functions but also channel change and all of the menu functions. With 6222, you also get DSC.

The system allows for mixing of radio types at the same operator, so that also other radios regardless if they are analogue or digital like Marine band, Air band, DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.

Menus available in many languages
