Mimer SoftRadio

Connecting radios all over the world

Remote control your Vokkero system using VoIP audio

Mimer SoftRadio is a system for remote control of two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

The remote control option for the Vokkero system gives a full duplex remote link.

Each operator can handle many systems and each system can be remote controlled by many operators.

The system allows for mixing of radio types at the same operator, so that also other analogue radios or digital radios as DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.
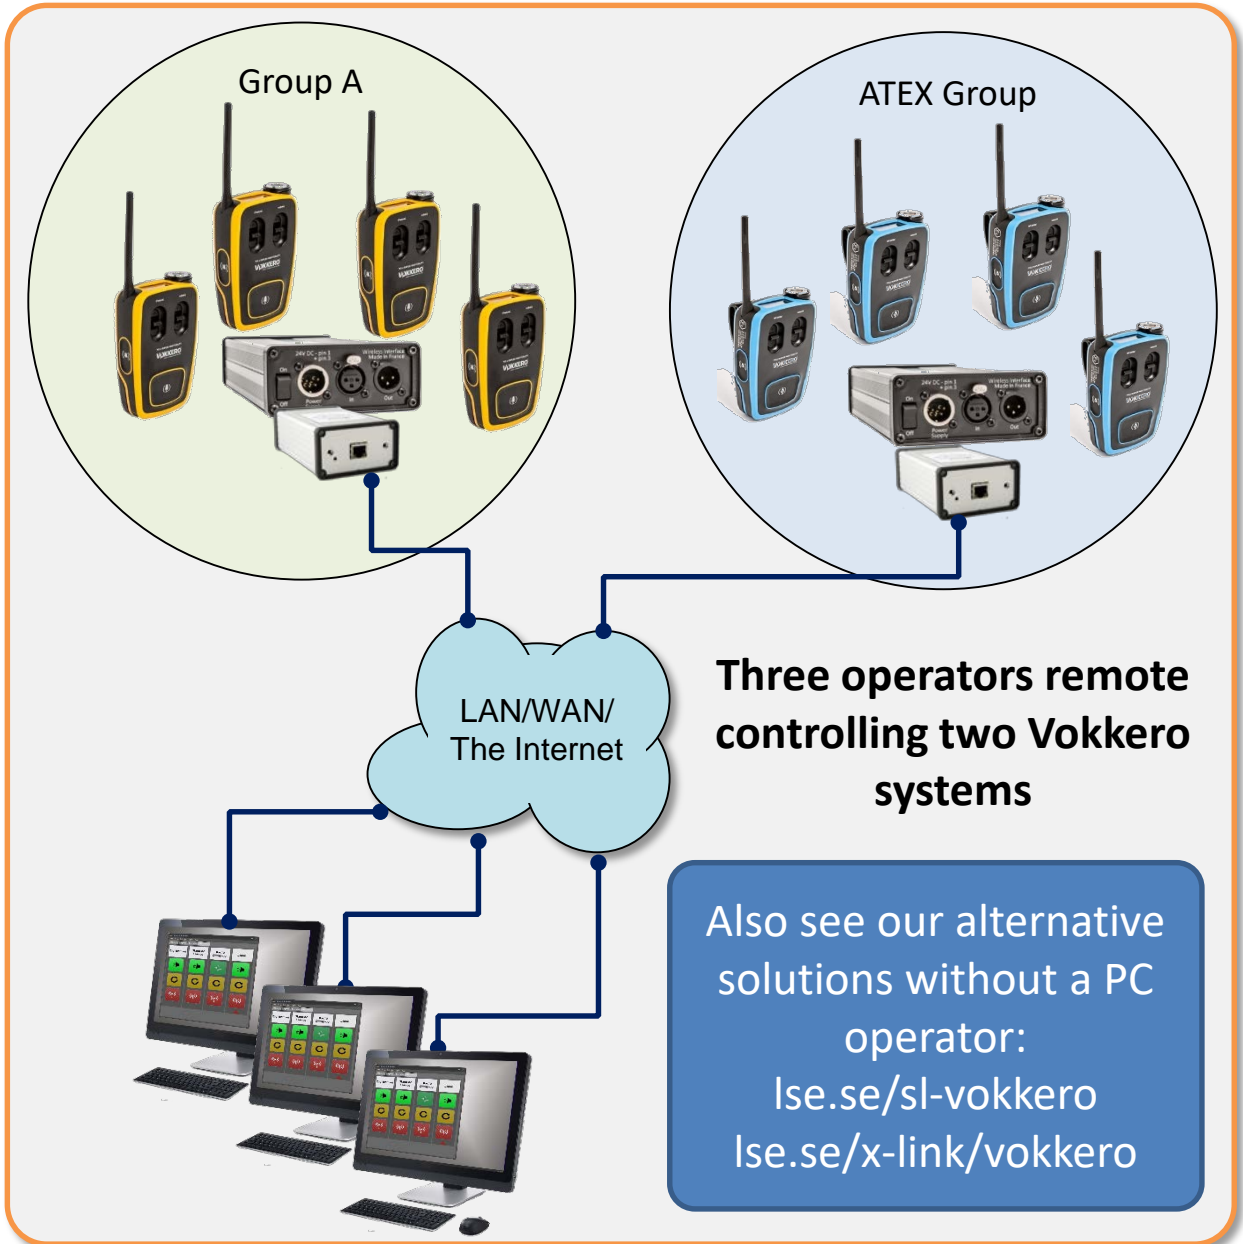

Optionally all audio can be recorded and calls can be cross patched between radio systems.

Menus available in many languages
