

Cable Kit 3015 Interface 3009/08

Mimer SoftRadio – Sepura SRM/SRG

Remote functionality

This cable kit will together with the Mimer Network Interface give remote control of the radios audio and PTT functions and it will present a full function Virtual Control Head.

Radio programming

No special programming is needed.

You might need to check that the Interface port is activated for control head use.

This kit works on radio firmware up to V10.21-004. Higher firmware requires the kit with interface 3009/49 and cable 3224.

Cable Kit

The red wire on the cable kit shall be connected to +12V and the black to ground.

Connection

The radio shall be powered through this cable kit instead of the standard power cable to avoid hum and noise.

Use the “Interface 1” connection on the radio.

The interface 2 connector can also be used in parallel for a standard Sepura control head.

Sepura SRG with Network Interface and cable kit

Virtual Control Head functions

The Virtual Control Head is a copy of the old “black and white” type control head. It is not possible to present the newer version with colour display.
