

# Mimer X-Link

*Connecting radios all over the world*

## Mimer X-Link

In many cases radio channels/talk groups from different systems needs to work together. For example airband channels together with ground channels at an airport, or harbour channels together with marine channels at a port.

**Mimer X-Link** [cross-link] gives you the ability to bridge almost any two radio systems. You only need to connect one radio from each system to the interface. Incoming audio on one radio will be re-transmitted on the other radio and vice versa.

### Bridge these systems:

- Analogue VHF to UHF
- Airband to ground
- Analogue to a DMR
- Analogue to a Tetra
- Tetra to a DMR
- Tetra to Tetra
- MPT to DMR
- Tetra to APCO
- Radio to PA-system
- Radio to PoC / Wave
- And more...

*X-Link MK2 Interface*

The heart of the X-Link is a small interface (130x120x30mm) that connects to both radios. The interface has settings for audio levels and detection of reception as well as triggering of the PTT.

- Stand alone system, when setup, it runs by itself
- Handles analogue radios as well as digital radios
- Uses the PEI port on Tetra radios

## Markets

- Airports
- Public Safety
- Harbours
- Borders
- Industry

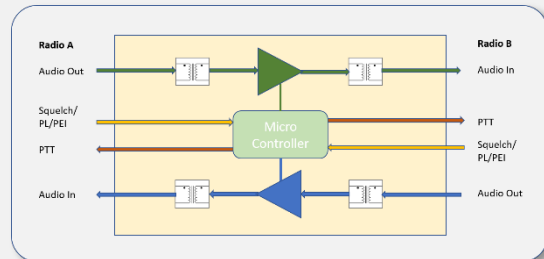

## Examples of use

## Basic parts

This simplified drawing shows the basic parts in the interface. All audio ports have transformers to avoid disturbances. The micro controller handles the Rx detection, PTT and the amplifying levels.

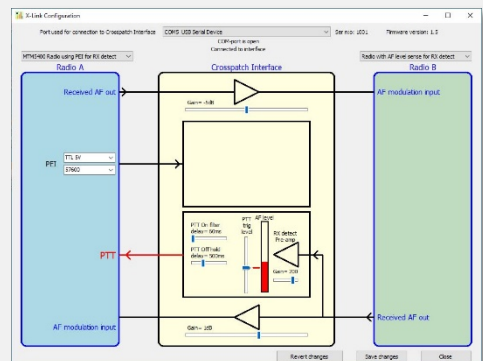

## Setting up the X-Link

When setting up the system, the audio levels in/out of the interface needs to be tuned. Also the trigger of incoming audio needs to be set so that PTT is done on the other radio. To do these settings a small Windows tool is used on a standard PC. Connection to the interface is done through a USB cable.

*For well known radio types we deliver the interfaces pretuned, ready to go.*

To make a complete kit, we provide cables to fit different radio types. We also provide guides for those who prefer to build the cable kits themselves. We can also deliver a ready to run setup on a rack shelf, including power supply etc.
