

Connecting radios all over the world

3390 - Mimer Train Antenna

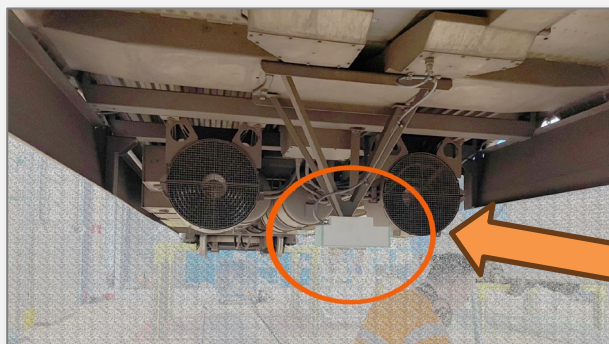

The Mimer Train Antenna is a purpose-built unit for communication between train and track, mounted underneath the train.

Train Antenna Unit

Basic Data:

- Center frequency: 56kHz
- Dimensions: 316x130x120mm
- Weight: 7,3Kg
- Connection: Fixed cable RG22B/U

The train antennas are designed to work in the rough train environments, and are highly resistant to heat, cold, moisture and vibration.

Installed underneath a train at Stockholm Metro.

The antenna can be tailor-made to fit with the needed installation's and can be adapted for the particular frequency band of the system.

Different mounting kits can be developed to fit the antenna according to the needs of a particular train type.
